The library was constructed by Claire Murphy and Dr. James
McCarter at Washington University, St. Louis. The CDNA was
made by using Dynabead oligo-dT priming (Dynal). PCR based
library using a modified protocol from the SMART PCR cDNA
Synthesis Kit from Clontech. Directionally cloned into the
Williamson of pAMP1. J2 were provided by Dr. Valerie
Williamson of the University of California at Davis
(vmwilliamson@ucdavis.edu)."

//clone_lib="Meloidogyne hapla J2 pAMP1 v1"
//clone = "Vector: pAMP1 (Gibco); Site 1: Not1; Site 2: Sal1;
The library was constructed by Claire Murphy and Dr. James McCarter at Washington University, St. Louis. The cDNA was made by using Dynabead oligo-dT priming (Dynal). PCR based library using a modified protocol from the SMART PCR cDNA Synthesis Kit from Clontech. Directionally cloned into the UDG sites of pAMP1. J2 were provided by Dr. Valerie Williamson@ucdavis.edu)."

Result

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New mammalian histamine H4 receptor proteins and polynucleotides encoding the proteins, useful in gene therapy for treating diseases where it is beneficial to elevate mammalian histamine H4 receptor activity.

WPI; 2002-114339/15.

N-PSDB; AAI70982

Claim 13; Fig 6A; 92pp; English.

The present sequence is that of a rat histamine receptor of the H4 subtype, as predicted from a cDNA clone isolated from a spleen cDNA library. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AAI70980-83) and polypeptides (see AAM50564-67). The nucleic acids have been expressed in recombinant host calls that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of histamine H4 receptor activity. Recombinant protein is useful for identifying modulators of the histamine H4 receptor. Such modulators may be useful

The present sequence is that of a mouse histamine receptor of the H4 subtype, as predicted from a cDNA clone isolated from a spleen cDNA library. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AA170980-83) and polypeptides (see AAN50564-67). The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant protein is useful for identifying modulators of the histamine H4 receptor. Such modulators may be useful for diagnosing, treating or preventing asthma, allergy, inflammation, cardiovascular and carebrovascular disorders, non-insulin dependent diabetes mellitus, hyperglycemia, constipation, arrhythmia, disorders of the neuroendocrine system, stress and spasticity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      300

The invention relates to human and mouse G protein-coupled receptors

(GPCRS) and nucleic acids encoding them. The invention also relates to

sequences at least 90% identical to the GPCR proteins and nucleic acids

of the invention; methods of treating, preventing or diagnosing diseases

compounds useful in the treatment of GPCR related diseases, at transgenic

compounds useful in the treatment of GPCR related diseases, at transgenic

compounds useful in the treatment of GPCR related diseases, at transgenic

compounds useful in the treatment of GPCR related diseases, at transgenic

computes comprising a GPCR gene of the invention; a mouse comprising a

mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived

comprising a dPCR mucle; kits comprising several mice, each of which has

comprising a dPCR mucleic acid. The GPCR mucleic acids and proteins may

be used in the diagnosis, treatment or prevention of a wide variety of

diseases including neurological disorders (e.g., Alzheimer's disease,

comprising a GPCR mucleic acid. The GPCR mucleic acids and proteins may

be used in the diagnosis, treatment or prevention of a wide variety of

disorders of the adrenal gland; disorders (e.g., Alzheimer's disease,

cell of safewarded; in functional disorders (e.g., Alzheimer's disease,

compounding neuropathy, Parxheson's disease or stratable bowel

compound a disease, diarrhoea, food poisoning or intratable bowel

compounded infarction); muscular disorders (e.g., outclammen disorders (e.g.,

AIDS); bone and joint disorders (e.g., outclammen disorders (e.g.,

cobseity, enzyme deficiency-related diseases or vitamin deficiency-related

                                                                                                                                                                                                                         The present invention describes transmembrane receptors, preferably human g protein coupled receptors (GPCR), for which the endogenous ligand is unknown (orphan GPCR receptors). More specifically the present invention relates to non-endogenous, constitutively activated versions of a human GPCR. These non-endogenous human GPCRs can be useful for the direct identification of candidate compounds as receptors agonists, inverse agonists or partial agonists for use as pharmaceutical agents. AAA46017 to AAA46126 and AAB02825 to AAB02859 represent sequences used in the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present amino acid sequence is the hRUP7, an endogenous human orphan G protein-coupled receptor (GPCR). The full length hRUP7 cDNA was cloned by RT-PCR using human peripheral leucocyte cDNA as template. The orphan GPCR of the invention, like all GPCRs has seven transmembrane aliphan helices with an extracellular N-terminus and an intracellular C-terminus. However, no endogenous ligands has yet been identified for the proteins of the invention. The orphan GPCRs may be used in the identification of antagonists for use as pharmaceutical agents. The proteins may also be used in the study of GPCR-mediated signalling cascades, and to elucidate their precise role in normal and diseased human conditions. Nucleic acid expression analysis to provide information about their function in healthy and pathological states

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This is a human G-protein coupled receptor (GPCR)-like polypeptide, PFI-013, encoded by cDNA of NCIMB 41073. The PFI-013 protein can be expressed by standard recombinant methodology. Antibodies and modulators of PFI-013 are useful in the manufacture of a medicament for treating allergic disorder, including extrinsic asthma, immunological disorders, such as

intrinsic asthma, vasculitic granulomatous disease, interstitial and other pulmonary disease, including chronic obstructive pulmonary disease (COPD), infectious, inflammatory disease, such as inflammatory bowel disease and neoplastic and myeloproliferative diseases. They are also useful for treating obesity, diabetes, metabolic, neurological diseases, sychotherapeutics, urogenital disease, reproduction and sexual medicine, inflammation, cancer, tissue repair, dermatology, photoagaing, skin pigmentation, cancer, tissue repair, dermatology, photoagaing, skin pigmentation, osteoporosis, cardiovascular, gastrointestinal diseases, allergy and respiratory disease, sensory organ disorders, aleap disorders and hair loss. The PFI-013 protein and nucleic acid are useful in the diagnosis and treatment of the above conditions and also for screening transduction. The antibodies are also useful for enrichment of cosinophils from mammalian, especially human blood and for detecting the protein in biological samples
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120

```
The present sequence is that of the human G protein-coupled receptor protein BG26, which shows significant homology with histamine H3, with activity of binding to histamine and capable of changing intracellular CAMP concentration in response to its stimulus. The protein is applicable as a tool in screening ligands or drug candidates for regulating signal transduction from such protein and treating diseases associated with its

Novel G-protein coupled receptor polypeptide and polynucleotide for treating cancer, autoimmune, pulmonary, cardiovascular and neurological disorders and for identifying modulators useful for treating asthma.

Claim 1; Page 50-51; 54pp; English.

The invention relates to the human of protein-coupled receptor AXOR35

CAMPS-15.1, to CDNA encoding AXOR35 (AAM15006), and to AXOR35 fragments
and variants. Like all of protein-coupled receptors, AXOR35 has an an an an an an an analysis of protein-coupled receptors such the composition of a such that are compared to the composition of AXOR35 and to an AXOR35-specific antibody. AXOR35 proteins and notections and host cells comprising AXOR35 DNN, to recombinant expression of AXOR35, and to an AXOR35-specific antibody. AXOR35 proteins and nucleotides may be used to treat a wide variety of disorders and nucleotides may be used to treat a wide variety of disorders and nucleotides may be used to treat a wide variety of disorders including bacterial, fungal, protozoal and viral infections, particularly HIV-1 or HIV-2 infections, palimia; osteoporosis; asthma; allerqies; urinary retention; acute heart failure; hypotension, hypertension; angina percention, acute heart failure; hypotension, hypertension; and percention; acroers, benign prostatic hypertension; and percention; acroers, and severe mental.

CC diabetes; obesity; anoraxia; bulimia; osteoporosis; acthma; allerqies; urinary retention; acroers, benign prostatic hypertension; and percention; acroers, benign prostation; and dyskinesias, such as Parkinson's disease, multiplic and neurological disorders and sarxiety; achisophresion, depression, depression, depression, depression, depression, depression, depression, and dyskinesias, and acroers, multiplicing or promoting the unclouding as are useful as vaccines, and AXOR35 proteins, unclocides are also multiplicy or expression. Such AXOR35 proteins and antibodies are also astricularly useful for treating asthma, and inhibiting or promoting the detection of hyphocytes, macrophages, costnophis or meurophis or meurophis or asthmatic lung. AXOR35 proteins, nucleotides and antibodies are useful for diagnostic reagents, in chromosome localisation and protociders are useful for mutations in the corresponding gene. AXOR35 pr

The sequence was isolated by searching databases with the sequence of known G-coupled protein receptor (GCPR). The gene is used for recombinant production of HR and for preparing antibodies (Ab). These Ab are used to purify HR by immunoaffinity chromacography, in immunoassay of histamine receptor, to identify cDNA clones that express the receptor, as antagonist to block binding of histamine (for treating any histamine-associated disorder) and to histamine (for treating any histamine-associated disorder) and to protein can be used in the treatment of e.g. inflammation, asthma, allergy, atopic dermatitias, erroke, myocardial infarction, migraine, chronic obstructive pulmonary disease, rheumatoid arthritis, multiple

This sequence represents a novel human G protein-coupled receptor (GPCR) designated nGPCR-2067. Like all GPCRs, nGPCR-2067 has 7 putative cransmembrane domains and is involved in signal transduction. The invention also relates to expression vectors and host cells comprising nucleic acids encoding nGPCR-2067, to recombinant expression of nGPCR-CC invention also relates to expression vectors and host cells comprising nucleic acids encoding nGPCR-2067, to recombinant expression of nGPCR-2067 and to modulators of nGPCR-2067 activity. nGPCR-2067 and species homologues and may also be used in genetic mapping. The invention also discloses the use of nGPCR-2067 activity nGPCR-2067 invention also discloses the use of nGPCR-2067 activity nGPCR-2067 invention also discloses the use of nGPCR-2067 activity nGPCR-2067 invention also discloses the use of nGPCR-2067 activity nGPCR-2067 invention also discloses the use of nGPCR-2067 activity nGPCR-2067 invention also discloses the use of nGPCR-2067 activity nGPCR-2067 incles or for the diagnosis of these disorders in GPCR-2067 mucleules for suppression of these disorders in nGPCR-2067 modulators may be used to treat a wide variety of modulators may be used to reat a wide variety of medical infections, particularly mental disorders, central nervous system conditions, particularly MIV-2 infections; pain; central nervous system, neurological and psychotic disorders such as Huntington's diseases, and metabolic diseases that may be treated cinclude cviral infections, particularly MIV-2 infections; pain; central cdementia, Alzheimer's disease, and Parkhimatory and psoriasis; cdementia, Alzheimer's disease, producers such as cancers, benign prostatic hypertrophy and psoriasis; concernia, thrombosis, myocardial infection, cardiowyopathies, and pervance and resource and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polynucleotide, useful for identifying modulator compounds which are used for treating psoriasis, schizophrenia, diabetes, encodes the novel G protein-coupled receptor (nGPCR) polypeptide (nGPCR-2067).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                121 RYRAQHTGILKIVAQMVAVWILAFLVNGPMILASDSWKNSTNTGECEPGFVTEWYILAIT 180

                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a histamine receptor. The polypeptide is useful for identifying an agonist or antagonist of a mammalian histamine receptor. It is useful as an antigen to elicit the production of antibodies. The histamine receptor polypeptide and polymucloptide are useful in the treatment and management of diseases such as inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial infection, migraine, chronic obstructive pulmonary disease (COPD), rheumation arthritis, multiple sclerosis, inflammatory bowel disease and psoriasis. They are also useful for modulating intracellular second messenger pathway activated through histamine receptors (cyclic-AMP, calcium, inosito) phosphate and mitogen activated protein (MAP) kinase), changes in cellular growth rate, secretion of hormones, receptor-stimulated Ca2+
                                                                                                                                                                Novel mammalian histamine receptor polypeptide useful for identifying agonist or antagonist for treating diseases such as inflammation, asthma, stroke, migraine, rheumatoid arthritis, multiple sclerosis, psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

The present sequence is that of a human histamine receptor of the H4
subtype, as predicted from a cDNA clone isolated from a bone marrow cDNA
library. The invention provides mammalian (human, mouse, rat and guinea
pig) histamine H4 receptor nucleic acid molecules (see AA170980-8) and
polypeptides (see AAM50564-67). The nucleic acids have been expressed in
recombinant host cells that produce active recombinant protein. The
paramacology of known histamine ligands is demonstrated. Mammalian
histamine H4 receptor may be used in gene therapy for the treatment of
diseases where it is beneficial to elevate mammalian histamine H4
ceceptor activity. Recombinant protein is useful for identifying
modulators of the human histamine H4 receptor. Such modulators may be
useful for diagnosing, treating or preventing asthma, allergy,
inflammation, cardiovascular and cerebrovascular disorders, non-insulin
dependent diabetes mellitus, hyperglycemia, constipation, arrhythmia,
disorders of the neuroendocrine system, stress and spasticity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 MPDTNSTINLSLSTRVTLAFFMSLVAFAIMLGNALVILAFVVDKNLRHRSSYFFLNLAIS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention provides an isolated histamine receptor, H4, which binds ligands comprising imidazole attached to amine by an alkyl chain. The H4 receptor can be expressed by standard recombinant methodology. Cells expressing H4 receptor protein at a detectable level can suppress cyclic adenosine monophosphate (CAMP) formation when contacted with the H4 receptor agonist. The H4 receptor and antibodies are used for identifying H4 receptor modulators. Modulation of histamine H4 receptors is useful for treating transplanted organ rejection, asthma, allergies and autoimmune pathologies such as multiple sclerosis, type I diabetes, cheuchmune pathologies such as multiple sclerosis, type I diabetes, protein and nucleic acids are useful targets to identify drugs that are effective in treating disorders associated with histamine-regulated processes. Identification and isolation of H4 receptor provides for development of screening of molecules that interact with H4 receptors. Genetic variants of H4 can be used to diagnose an H4 associated disease.
                                                                                                                                                                                                                                                                     Histamine receptor; H4; antirheumatic; antiarthritic; immunosuppressive; antiasthmatic; antiallergic; neuroprotective; antidiabetic; human; cerebroprotective; cAMP modulator; gene therapy.

The present invention relates to a new G-protein coupled receptor (GPCR) polypeptide comprising greater than 70% amino acid sequence identity to the amino acid sequence of human GPCRS TGR62, TGR21, TGR3130.2, human TGR213 or TGR92, 80% amino acid sequence identity to mouse TGR18 or 90% amino acid sequence identity to mouse TGR18 or 64fined in the specification. The GPCR covalently linked to a solid phase is useful for identifying a compound that modulates signal transduction. The identified compounds are useful for treating kidney disease, cerebral cavernous malformations, hyperlipidemia, obesity, dyslexia and cardiac myxoma. The molecules of the invention are useful for diagnosing disorders or conditions such as venal failure, nephritis, nephrotic syndrome, asymptomatic urinary abnormalities, renal tubule defects, hypertension and nephrolithiasis, liver-related disease or condition e.g. cirrhosis, infiltrations, lesions, functional disorders and jaundice and spleenassociated disease and others. Modulation of the polypeptide of the invention is useful to treat or prevent any of the above conditions or diseases. The present amino acid sequence represents the human GPCR TGR5 protein of the invention. This sequence is one of seven novel G protein coupled receptors of the invention (AAU74904-AAU74911)
treating kidney disease,

Human; receptor; G-protein coupled receptor; AXOR35; lymphocyte; Human G-protein coupled receptor AXOR35.

The invention relates to an isolated G-protein coupled receptor

polypeptide, AXOR35, (and its homologues and variants) and its encoding

polypucleotide (and its homologues, variants, complements and RNA

equivalents). Also included are an anti-AXOR35 antibody, an AXOR35

cypression vector, producing a recombinant host cell by introducing the

cypression vector, producing a recombinant host cell by introducing the

cypression vector and antibiting are promoting the function of

the host cell expressing AXOR35, identifying/screening for agonists or

antagonists of AXOR35 and inhibiting or promoting the function of

lymphocytes, macrophages, eosinophils, or neutrophils in diseased tissue,

by administering to the patient AXOR35 agonists or antagonists. The

agonist or antagonist identified is useful for treating a disease such as

macrophages, eosinophils, or neutrophils in diseased tissue such as an

cathmatic lung. AXOR35 or polymucleotide is useful in diagnostic assays,

for identifying compounds that are agonists or antagonists of AXOR35, as

vaccines, or for treating infections (bacterial, fungal, protozoan or

viral infections), transplant rejection, qastrointestinal disorders (such

as gastric ulcer), inflammatory bowel diseases (such as atopic

corritable bowel syndrome, voniting, inflammation (such as atopic

dermatitis), allergy, autoimmune (such as urinary retention),

psoriasis), urological diseases (such as urinary retention),

cardiovascular diseases (such as urinary retention),

cardiovascular diseases (such as encompanied or for the form of a protocopy or

disease), cough, renal diseases (such as renal ischemmia),

Nov 15, 2002 this sequence version replaced gi:23812823.

The sequence on this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.twc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs are contage and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              217900: contig of 217900 bp in length 218000: gap of unknown length 214816: contig of 16816 bp in length 234916: gap of unknown length 234916: contig of 1778 bp in length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /organism="Rattus norvegicus"
